

The Masterpieces - User Manual

Texas Master Chorale - Masterpieces - booking, ensemble & repertoire manager

App URL: <https://the-masterpieces-app.netlify.app>

This guide covers everything the app does, organized the way you actually work. If you only read one section, read **Bookings** - it's the heart of the app.

1. The big picture

The app has **two separate experiences**:

Who	What they open	What they see
Beth / managers	the main app URL	Everything - dashboard, bookings, events, music, prospects, archive
Singers	their personal portal link	Only their own schedule, RSVP, sheet music, and "can't sing" calendar

A singer never sees your bookings, revenue, or other admin - just their own stuff.

Tip: the app is a website, so it works on a laptop, iPad, or phone, and there's nothing to install. If something looks stale after an update, do a **hard refresh** (Mac: Cmd+Shift+R, Windows: Ctrl+Shift+R).

2. The top navigation

Across the top you'll find seven tabs:

Dashboard - Ensemble - Bookings - Events - Music - Prospects - Archive

Click the logo anytime to jump back to the Dashboard. Your name (Beth - Manager) sits at the top right.

3. Dashboard

Your home screen and daily snapshot.

- **Email status chip** (top right): *Email connected* means Send Now is live; *not configured* means it still needs setup (see §11).
 - **Stat cards:** The Ensemble (voice count), Cloud Library (songs), Follow-ups Due, and **Revenue** (this year + all-time). Click any card to jump to that area.
 - **Calendar:** a month view with ** green dots = events, ** **amber** = **bookings**, ** red = a singer is unavailable **that day**. **Tap a day to see what's on; tap an item to open it. Use ** ** to change months**, Today to snap back. **Below the calendar**, "Who's away - upcoming" lists each singer's blackout periods so you can plan around them.
 - **Next Performance** card: your soonest upcoming event and who's confirmed.
 - **The Four Voices:** a quick look at your S/A/T/B sections.
-

4. Ensemble - your singers

Everyone who sings (or directs).

- **Director/Manager** (Beth) shows at the top as a banner - she's *not* in the singer lists and can't be picked for events.
- **Core members** and **Guest singers** are listed separately.
- **Add Singer:** top-right button -> name, voice part, role (core or guest).
- **Tap a singer** to open their card. From there you can:
- **Copy link / Email it** - sends them their **private Singer Portal** link (§12).
- **Edit Details, Mark Inactive / Reactivate**, -> **Make Guest / Make Core**, or **Delete**.

Guests: subs you bring in for a single event. You can add a guest on the fly from a booking's lineup too (see §6).

5. Bookings - the heart of the app

A **booking** is an inquiry -> a potential performance. The app walks you from "someone asked" all the way to "it's on the calendar."

5a. Creating a booking - the wizard

Tap **New Inquiry**. A guided, 4-step wizard appears: 1. **Who's asking?** - contact name + organization (required), phone, email. 2. **What's the event?** - date + occasion. 3. **What will you send?** - pick a **format**. This is the important one: each format sets **how many singers you need**: - Quartet = 4 - Trio = 3 - Duo = 2 - Soloist = 1 - Quintet = 5 - Sextet = 6 - **DJ = 0 (no singers)** - Plus the expected fee. 4. **Anything else?** - notes, then a **review** of everything -> **Create Booking**.

5b. The booking list

Each card shows the status and a **lineup chip** at a glance: - Quartet - 2/4 (amber - still filling) - Trio check (green - covered) - lineup TBD (grey - not started) - DJ (teal). Overdue follow-ups get a red left edge and an **"overdue"** banner at the top. The list sorts by soonest event.

5c. Inside a booking - the "Next step" coach

Open any booking and a black **"Next step"** card tells you exactly what to do next and gives you the button to do it. The flow is:

Details -> Lineup -> Availability -> Confirm -> Event.

Building the lineup & checking availability: - The **Singer Availability** panel lists your singers. **Tap a singer's** + to add them to this event's lineup. Mark each one **yes / maybe / no** as they reply. - Anyone who blocked that date in their portal is flagged **"x Away this date"** automatically - so you don't have to email to ask. - + **Guest** brings in a sub on the spot. - **Email Availability** sends a branded "are you in?" email to the singers you picked (it pulls their emails automatically). - The panel shows **"X / N confirmed."** When you have enough yeses, it turns green: **"Lineup covered."**

If you can't fill the lineup, you have three outs: - + **Invite a guest singer**, or - -> **Downsize** to a smaller format (Quartet->Trio->Duo...), or - **Make it a DJ engagement** (0 singers).

Confirm & convert: - **Confirm with client** marks it confirmed (you can confirm even if not fully covered - it'll say "anyway"). - **Add to Events** turns the confirmed booking into a real event, carrying the format, lineup, and availability over.

Other actions: Compose Email, Edit, Log Follow-up (auto-sets the next nudge), Mark Contacted, Mark Lost, **Delete**.

6. Events - upcoming performances

Confirmed/upcoming performances live here (past ones move to **Archive**, §10). Opening an event lets

you:

- **Manage the lineup** (same Singer Availability panel as bookings).
 - **Pick songs** - the **Program** picker pulls from your Music library. Each chosen song shows an **iPad** or **Cloud** tag (whether it's loaded on the singers' iPads).
 - **Send Proposal** - emails the program (the song list) to the client.
 - See the event's **contact and notes**, **Edit Event**, or **Delete**.
 - The "**Next step**" coach here nudges: Lineup -> Program -> Proposal.
-

7. Music - your repertoire library

Two things in one: your **song library** and a **one-tap iPad loader**.

- **Upload Arrangement:** title, arranger, category, pages, file size, a **Download link** (a shareable PDF/Drive URL singers can download), and a destination.
 - Each piece is **** On iPads or ** Cloud only - tap to flip** it, pushing/pulling that chart to every singer's iPad at once.
 - The teal panel up top shows how many pieces are on the iPads and storage used.
 - **Search** by title/arranger and **filter** by category.
 - The **Download link** is what powers the singers' download buttons in their portal - paste a shareable link per song and it appears for them.
-

8. Prospects - leads & past clients (your CRM)

Everyone worth reaching out to: cold leads *and* every past client.

- **Past clients** (pulled from your event history) show a ***** client badge and Booked**** status, with their booking history in the notes.
- **Stat tiles** by type (Service & Social Club, Church/Faith, Senior Living, Club/Venue) - tap to filter.
- **Filters:** status chips + "Only show" toggles (has email / contact / phone) + search.
- **Tap a prospect** to see contact info, notes, and actions: **Compose Email, Mark Contacted/Interested, Convert to Booking, Edit, Pass**.

8a. The Stay-in-touch drip

Keep past clients warm with periodic "we're available" reminders. - On a prospect, **Start drip** schedules a reminder (default every 90 days). - The Prospects tab shows a "**reminders due**" banner; cards show a **drip / reminder-due** pill. - **Send reminder** opens a pre-written "**Stay in Touch**" email, logs it, and schedules the next one. - *(Currently you click to send each reminder - it's guided, not fully automatic. Ask if you'd like it automated.)*

9. The lifecycle at a glance

Every performance follows the same path through the app:

Prospect -> Booking (inquiry) -> confirm -> Event -> (after the date) -> Archive.

A *prospect* you reach out to becomes a *booking* when they're interested. You build the lineup and confirm it, then **Add to Events**. Once the date passes, it moves to the **Archive** automatically - where it feeds revenue totals and the re-engagement drip. Nothing is ever lost; each tab is just a different window onto the same journey.

10. Archive - past performances

Every performance that's already happened, kept in full for your records and re-engagement. - **Revenue**

summary up top (all-time, this year, # past performances). - **Search** past events by name, contact, or notes; sorted most-recent-first. - Open any archived event to see its **contact + notes** and an "**Email client - re-book**" button that opens the Stay-in-touch reminder - turning your history into new bookings.

11. Email - sending from the app

The app sends **fully branded** emails (logo, your colors) from **info@themasterpieces.org** (replies come to your Gmail).

- **Compose Email** (from a booking, prospect, event, or archived client) opens the composer.
- **Templates:** Cold Intro, Initial Outreach, Gentle Follow-up, Booking Confirmation, Thank You, **Stay in Touch** (drip), plus the **Availability Request** (to singers) and **Program Proposal** (to clients).
- **Buttons:**
- **Send Now** - sends the branded email instantly (this is the main one).
- **Open in Mail App** - opens your mail program with a plain-text version.
- **Copy Formatted** - copies the branded version to paste into Gmail.
- The **Recipients** line fills automatically (the lead/singer emails you've picked).

Status: the chip on the Dashboard and in the composer shows whether email is **connected**.

One-time setup (admin): email works through a service called **Resend** with a verified domain. If you ever see "not configured," the Resend API key needs to be set in Supabase. (See §14.)

12. The Singer Portal - what your singers see

Each singer opens their **private link** (from Ensemble -> Copy/Email link). No password. They see:

- **Their upcoming events** - date, venue.
 - **RSVP** - Yes / Maybe / No, which writes straight back to your availability tracking (so singers can self-confirm).
 - **"Singing with you"** - the rest of that event's lineup.
 - **Music** - the program, with **Download** buttons for each piece (when you've added a download link).
 - **"When you can't sing"** calendar - they tap days they're unavailable. **You see those instantly** (red flags on bookings/events and the dashboard) - no need to email and ask.
 - **Director contact** - a one-tap email/call button to reach Beth.
-

13. Tips, FAQ & troubleshooting

- **Something looks old / didn't update?** Hard refresh (Cmd/Ctrl + Shift + R).
 - **A screen went blank?** The app now shows a "Something went wrong - Reload" message with the error; tap Reload, and if it persists, send Beth/the developer that message.
 - **Email says "not configured"?** The Resend key isn't set (see §14).
 - **Singer download says "Not posted yet"?** That song has no download link - add one in Music -> edit the arrangement.
 - **A singer shouldn't be in the list?** Mark them inactive, or set them as Director (directors are excluded from singer lists).
 - **Deleting** anything asks you to confirm, and removes related availability records - it can't be undone.
-

14. Behind the scenes (for whoever set it up)

- **Hosting/data:** the app is a static site on **Netlify**; data lives in **Supabase** (Postgres). Every push to the repo auto-deploys.
- **Email:** a Supabase Edge Function (send-email) sends via **Resend**. The API key lives in Supabase

(RESEND_API_KEY secret or the app_config table). The sending domain **themasterpieces.org** is verified in Resend; the "from" is **info@themasterpieces.org**, reply-to the group Gmail.

- **Singer portals:** a second Edge Function (member-portal) serves each singer's data by their private token - it never exposes manager data.
 - **Imported data:** the event history (revenue spreadsheet) and the past-client prospects were loaded from Beth's files.
-

Questions, tweaks, or new features? The app is built to grow - just ask.
